Alex Albon — Places Gained or Lost From Grid

2026 Singapore Grand Prix · Marina Bay · Sunday 2026-10-11

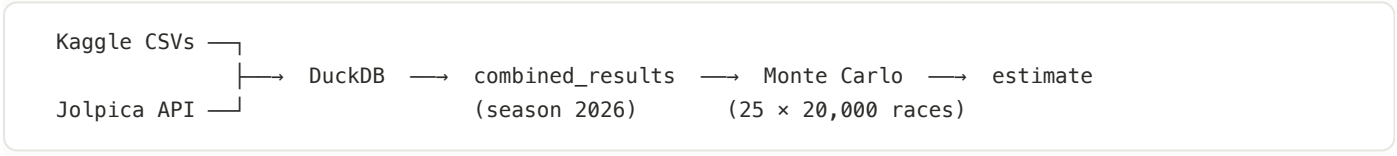

+1

ESTIMATED CHANGE, GRID SLOT TO FINISH

middle half −2 to +3 · middle 80% −4 to +5

Question	How many positions will Alex Albon move relative to his starting position on the grid at the Singapore Grand Prix?
Convention	Grid slot minus classified finishing position. Starts 18th, finishes 19th = **−1**. Positive means places gained
Status	**Pre-race.** Qualifying has not run — his grid slot is unknown and is simulated
Prepared	2026-10-08
Data source	`data/processed/f1_analytics.duckdb` — refreshed 2026-10-08
2026 coverage	16 rounds with results · 286 rows Jolpica + 66 rows Kaggle · 22 cars per race

1 · Type of analysis and why

Method: Monte Carlo simulation. The race is simulated 500,000 times. Each simulated race draws every uncertain ingredient at random from real 2026 results, and the answer is read from where the outcomes pile up.

WHY A SIMULATION, NOT A SINGLE FORMULA	WHAT IT MEANS HERE
The outcome is two different races in one	When Albon finishes he averages +2.3 places; when he retires, −2.7. An average of the two describes a race that rarely happens
His grid slot is unknown	Qualifying has not run and the starting slot changes the answer, so each simulated race draws a grid slot too
Only 16 races of evidence	The simulation carries that uncertainty through to the result instead of hiding it in one number

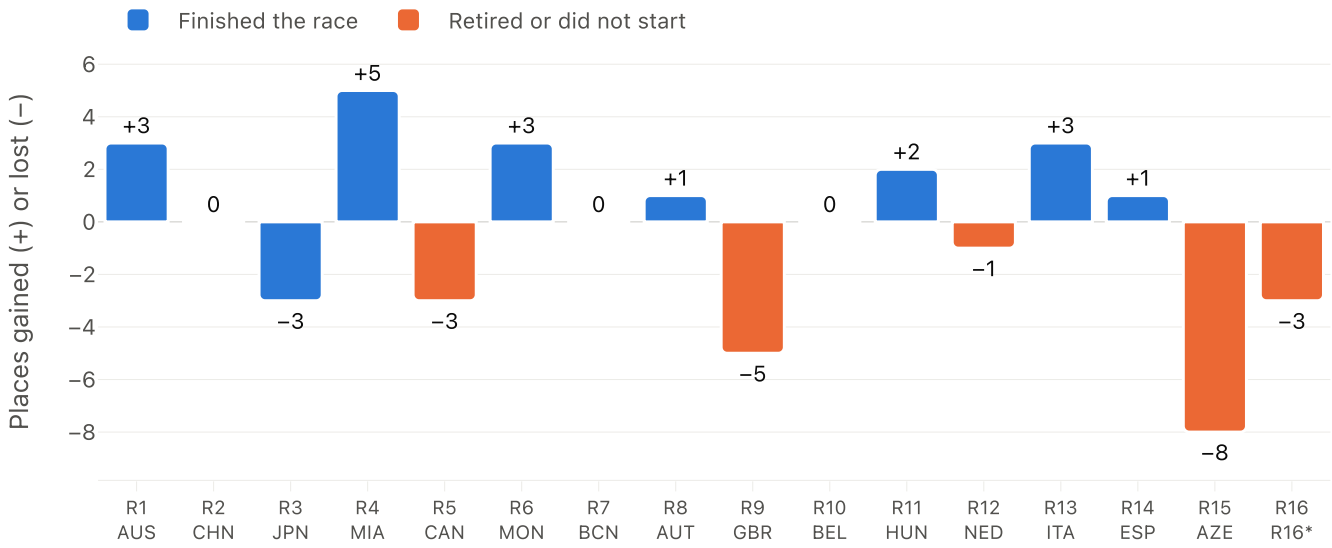

THREE DRAWS PER SIMULATED RACE

DRAW	SOURCE
1 · Grid slot	His 16 starting slots this season, recent races weighted more (weight halves every 6 races)
2 · Retires or finishes	His record of 6 non-finishes in 16 blended with the field rate of 21%, giving a **32%** retirement chance that itself varies from race to race
3 · Places gained or lost	If he finishes: half the draws from his own 10 finishes, half from other 2026 finishers who started within two slots of him. If he retires: from 2026 retirements from a similar slot

2 · Season to date — every round

QUERY — ALBON GRID SLOT, FINISH AND CHANGE PER ROUND

```
SELECT round, race_name, grid, position, grid - position AS change, status
FROM combined_results
WHERE season = 2026 AND driver_id = 'albon'
ORDER BY round;
```

Places gained or lost in each 2026 round. Finishes cluster just above zero; every loss of three or more places except Japan came from a retirement.

+1.5
MEAN WHEN HE FINISHES (10)

−3.3
MEAN WHEN HE RETIRES (6)

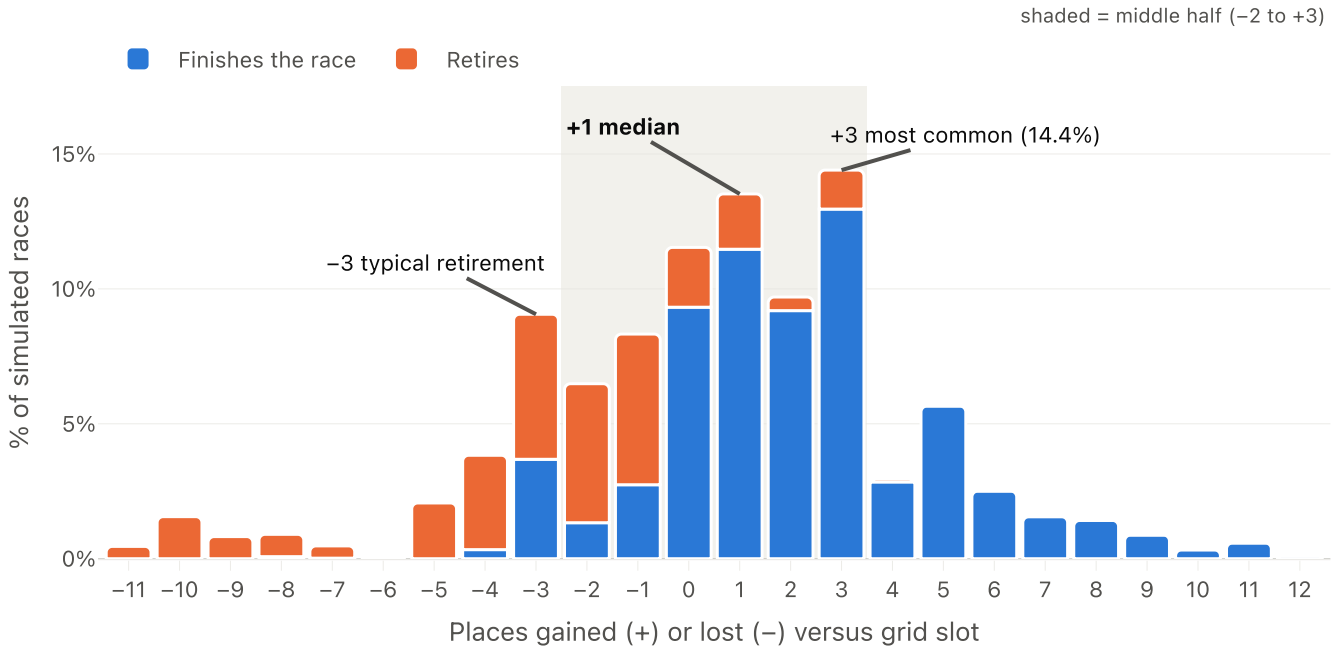

−0.3
MEAN, ALL 16 ROUNDS

16.6
MEAN GRID SLOT

ROUND	RACE	GRID	FINISH	CHANGE	NOTE
R1	Australian	15	P12	**+3**	
R2	Chinese	22	P22	**0**	Did not start
R3	Japanese	17	P20	**−3**	
R4	Miami	15	P10	**+5**	
R5	Canadian	18	P21	**−3**	Retired
R6	Monaco	11	P8	**+3**	
R7	Barcelona	18	P18	**0**	
R8	Austrian	18	P17	**+1**	
R9	British	16	P21	**−5**	Retired
R10	Belgian	15	P15	**0**	
R11	Hungarian	19	P17	**+2**	
R12	Dutch	16	P17	**−1**	Retired
R13	Italian	20	P17	**+3**	
R14	Spanish	16	P15	**+1**	
R15	Azerbaijan	12	P20	**−8**	Retired
R16	Bahrain in Malaysia*	18	P21	**−3**	Retired

Chart labels use three-letter race codes. * Round 16 arrived from Jolpica labelled "Bahrain Grand Prix in Malaysia"; see caveats.

3 · Simulation result

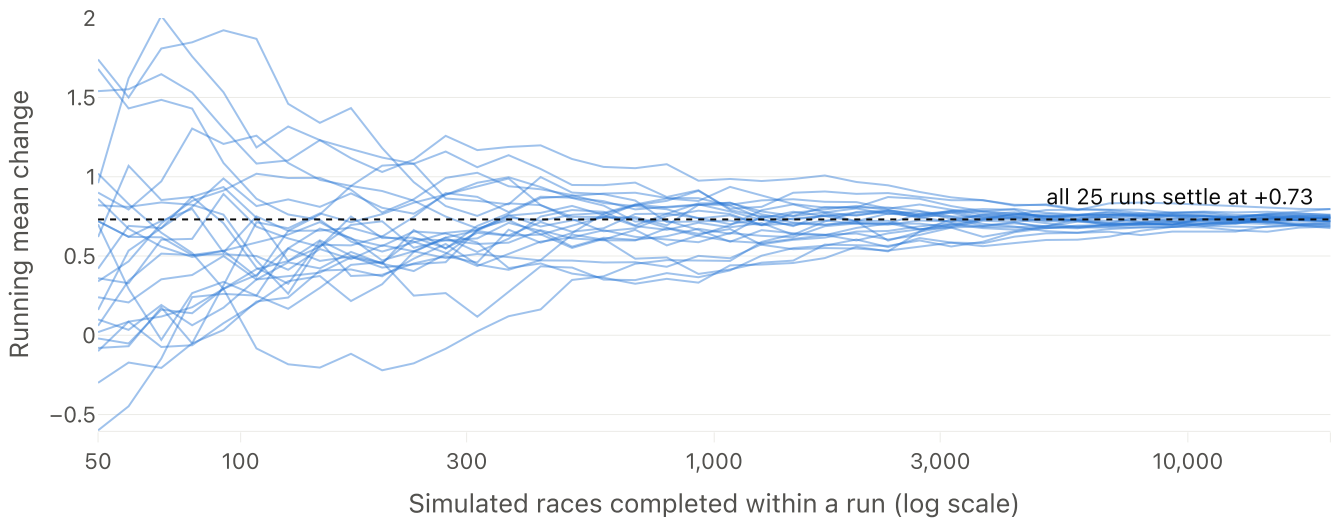

Share of 500,000 simulated races at each outcome. Two overlapping shapes: finishes centred on +1 to +3, retirements centred on −3. 0.9% of races fall beyond +12 and are not drawn.

54%	12%	34%	32%
GAINS PLACES	NO CHANGE	LOSES PLACES	RETIREMENT CHANCE

The lean toward a gain is weak. The three most likely single outcomes sit close together: **+3 (14.4%)**, **+1 (13.5%)** and **0 (11.5%)**. The median, +1, is the estimate because it is the value with half of all outcomes on either side.

4 · Where repeated runs end up

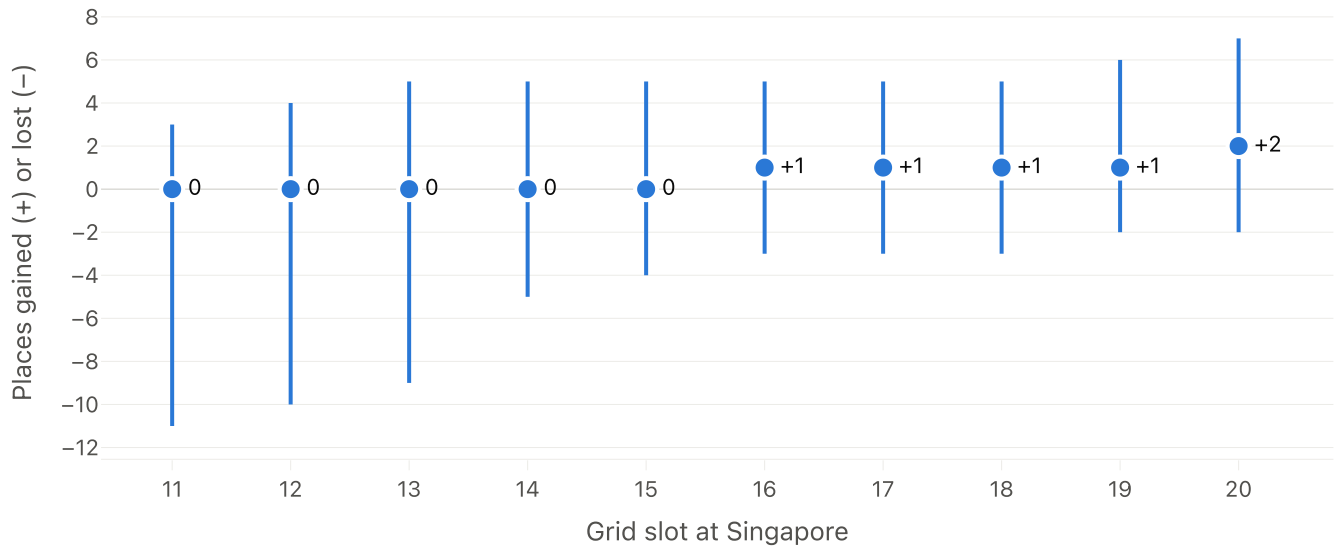

Each line is one of 25 independent runs. Early on the runs disagree by more than a full place; by 20,000 races they agree to within about a tenth of a place.

MEASURE	AVERAGE OF 25 RUNS	LOWEST RUN	HIGHEST RUN
Median change	**+1**	+1	+1
Most common change	**+3**	+3	+3
Mean change	**+0.73**	+0.68	+0.80
Chance of gaining places	**54.5%**	53.9%	55.1%
Chance of losing places	**34.0%**	33.2%	34.5%

CHANGING THE ASSUMPTIONS DOES NOT MOVE THE MEDIAN

ASSUMPTION CHANGED	RETIRE	MEDIAN	MEAN	GAINS	LEVEL	LOSES
Base case	32%	**+1**	+0.73	54%	12%	34%
Exclude round 16	29%	**+1**	+0.83	56%	12%	32%
No recency weighting on grid slots	32%	**+1**	+0.80	55%	12%	33%
Finishing change from field peers only	32%	**+1**	+1.31	57%	7%	36%
Finishing change from Albon's own finishes only	32%	**+1**	+0.17	52%	16%	32%
Retirement rate = field average	22%	**+1**	+1.23	61%	12%	27%
Retirement rate = Albon's own record	37%	**+1**	+0.47	51%	11%	38%

5 · Grid slot is the biggest lever

Median change (dot) and middle 80% of outcomes (bar) if his grid slot were known. From 15th or better a retirement costs many places and little can be gained; from the back the opposite holds.

IF HE STARTS	MEDIAN	MIDDLE 80%	GAINS	LEVEL	LOSES
P11	**0**	−11 to +3	44%	11%	45%
P12	**0**	−10 to +4	45%	12%	43%
P13	**0**	−9 to +5	46%	11%	43%
P14	**0**	−5 to +5	47%	11%	42%
P15	**0**	−4 to +5	49%	10%	40%
P16	**+1**	−3 to +5	51%	10%	39%
P17	**+1**	−3 to +5	54%	10%	36%
P18	**+1**	−3 to +5	59%	11%	31%
P19	**+1**	−2 to +6	60%	14%	26%
P20	**+2**	−2 to +7	67%	15%	18%

REVISE ONCE QUALIFYING LANDS

IF ALBON QUALIFIES	THEN ESTIMATE
15th or better	0
16th to 19th (typical)	**+1**
20th or worse	+2

ALBON AT SINGAPORE

SEASON	GRID	FINISH	CHANGE	NOTE
2019	6	P6	**0**	
2022	18	P17	**+1**	Collision damage
2023	14	P11	**+3**	
2024	11	P20	**−9**	Retired
2025	20	P14	**+6**	

His five Singapore results are too few and too scattered to tilt the model, so no circuit adjustment is applied.

6 · Caveats

- **Qualifying has not run.** Grid slot is the largest single input and is simulated, not known.
- **Round 16 is unresolved.** Jolpica returned a full round 16 result labelled "Bahrain Grand Prix in Malaysia", while the calendar table lists round 16 as Singapore on 2026-10-11. The base case includes it; excluding it keeps the median at +1.
- **No Singapore-specific or weather adjustment.** Safety cars, rain and penalties are represented only to the extent they shaped 2026 results so far.
- **This is a pre-race estimate, not a computed answer.** It should be reconciled against the classified result once Singapore data lands.

Generated 2026-10-08 from `data/processed/f1_analytics.duckdb` · 25 runs × 20,000 simulated races, seeds 0–24 · charts are interactive in the HTML version of this report.
